Boardcare water testing Reagent to use with Saltesmo test disc

Contents:

Boardcare Salt
Reagent

1 x 250ml

Order# H00021

Salt reagent is used in the Halides test with Saltesmo to optimize results. The purpose of this onboard test is to determine the type of water found in used oil. This reagent helps to separate salt from water-contaminated oil (if saltwater is present) and allows it to concentrate at the bottom of the test tube. The settled water/reagent mixture will provide an indication when using Saltesmo.
