

# Boardcare

## Boardcare Saltesmo test disc to estimate chloride/ Bromide/ Iodide in water or water contaminated used engine oil samples

### Contents:

Boardcare Saltesmo  
30 test discs

1 Each

## Order# H00031

For the contaminant water type identification as saline or non-saline SALTESMO provides an instant answer and it is very useful especially onboard when there is a contamination of in-service lubricants with water.

### Colour reaction:

SALTESMO reacts with chloride, bromide and iodide changing colour from red-brown to yellow. The size of the faded (yellow) circle is proportional to the total concentration of chloride, bromide and iodide.

Please follow the test instruction available in the Saltesmo box for testing water to identify the type of water as saline or non - saline.

Water containing sodium chloride at concentrations above 1,000 ppm(1.0g NaCl) is generally considered saline.
